

Mission

The eGo™ Project was formed to advance the use of eGo technology by designing the technology, developing specifications, demonstrating use case devices and services and making the market aware of eGo™ technology. Formed in 2010, the eGo project now has 11 members. Manufacturers, applications developers, academic institutions, and more all work together to promote the development of eGo™ technology.

Goals

The goals of the eGo™ Project are to:

- Develop eGo technology specifications that define a modular architecture for eGo devices and protocols [tadalafil precio](#)
- Promote eGo™ technology
- Design the essential technological building blocks for eGo™
- Build demonstrations illustrating the possibilities of eGo technology in numerous areas
